Customer service - as individual as your company

Customer service - as individual as your company

The use of personal protective equipment requires the regular maintenance and repair of the products you use. RESPIREX™ offers you a customized service.

- Examination
- Maintenance
- Cleaning
- Repair
- Failure analysis
- Job Analysis
- Education
- Training

All these services are available at your location, at our local service partner or in our factory at Redhill in the UK.

What can we do for you?

As you would expect from a specialist in protective clothing, we are meticulous in ensuring your PPE/RPE equipment is maintained as 'fit for purpose'. Our customers come from the chemical & petrochemical industries, pharmaceuticals, the emergency services, military and other government departments. The requirements of our customers are manifold and extend from the assistance and supervision of PPE for plant shutdowns to the repair, testing, recertification, delivery and commissioning of personal protective equipment. Our service technicians are on duty worldwide and support our customers around the clock in all aspects of maintenance.

Our after-sales service is global and fully equipped to meet our customers' needs.

If you need a technical service in a remote location anywhere in the world, we'll help you. Fast, reliable and practical.

Respirex maintains its own independent, UKAS-certified laboratory for testing material properties and chemical permeation. We can advise our customers on the choice of the right protective clothing material and, if necessary, even carry out a specific analysis.

Our laboratory has many industrial and commercial customers outside of our own company and offers reliable testing for all aspects (e.g., permeation / abrasion resistance / flex crack resistance / puncture resistance / etc.) around protective clothing.

You have a chemical substance for which permeation data is not yet available - we can be commissioned to carry out secure, commercial permeation testing for you.

Do you need training or instruction in your new protective clothing for your employees or would you like to regularly brief new employees in the safe use of their protective equipment? No problem - just call.

Would you like to repair the protective clothing supplied by us? - we can train your in-house technician and regularly re-certify.

Breathe easy - Technical service can be easier and more cost effective than you think.

We are always available with friendly help and advice!
